Level 1 Practice: Creating a Listing Report for Missing Data

Use PROC PRINT and the WHERE statement to examine the **pg1.eu_occ** table.

1. Create a new program.

   - Write a PROC PRINT step to read the **pg1.eu_occ** table.
   - Use a WHERE statement to list rows where **Hotel**, **ShortStay**, and **Camp** are missing.
   - Submit the program.

   ```
   proc print data=pg1.eu_occ;
       where Hotel is missing and ShortStay is missing and
           Camp is missing;
   run;
   ```

2. How many rows are included?

   The SAS log shows that 101 rows are included.

3. Modify the WHERE statement to list rows with **Hotel** values greater than 40,000,000. Submit the program.

   ```
   proc print data=pg1.eu_occ;
       where Hotel > 40000000;
   run;
   ```

4. Which months are included in the report?

   The months 07 (July) and 08 (August) are included.
